www.aci-consulting.net

aci consulting is back in Denver to better provide environmental services to its existing and new clients. With an extensive track-record in the ever-changing environmental regulatory setting, **aci's** focus on teamwork and creativity yields high marks with its clients – helping to make informed decisions, establish consistent methodologies and policies, and reduce risk and costs. **aci** is a certified DBE/WBE firm.

Recognized for its **problem-solving** to address environmental components and compliance requirements while responding to the client's goals and needs, **aci** has earned a reputation for scientific methodology, field work and quality communication tools resulting in innovative solutions that enhance the natural and man-made environment.

A **multi-disciplinary team** of professional biologists, archeologists, geologists, environmental scientists and planners, **aci** provides natural and cultural resource management, regulatory compliance, construction management, risk assessment and planning services to the public and private sectors throughout the United States, Mexico and Canada.

Natural Resource Services

aci has extensive experience to ensure Endangered Species Act compliance, including Section 7 consultations and 10(a) permits. **aci** conducts habitat evaluations, censusing surveys and permitting for protected species, including the Preble's meadow jumping mouse, bald eagle, and other terrestrial and aquatic species. Under the Clean Water Act, **aci** has conducted hundreds wetland delineations, permit authorizations and established wetland mitigation banks. Under National Environmental Policy Act, **aci** prepares categorical exclusions, environmental assessments and environmental impact statements.

Cultural Resource Services

aci offers cultural resource services necessary to comply with State and Federal law for a variety of projects, including: fieldwork and compliance coordination; specialized research; laboratory and collections management; publications and presentations; and policy planning.

Geosciences Services

aci provides geological services for areas having unique geologic characteristics or specific geologic needs including surface and subsurface investigations. **aci** has expertise in constraint analysis, surface and subsurface hydrologic analysis and geospatial studies. With licensed geoscientists **aci** also provides services in hazardous material investigations and remediation; sand, gravel, rock quarries; hydrogeology studies; soil evaluations; cave exploration and mapping; and groundwater and spring-shed analyses.

aci utilizes highly advanced Geographic Information Systems (GIS) technology integrated with its environmental services or as a stand-alone service, including cartographic and photographic analysis, digital imaging & full-service color; reproduction; multi-format photo documentation; GIS, GPS, & Digital cartography; and graphic arts and publishing.

Construction Management and Monitoring Services

aci provides construction management, environmental oversight and monitoring for construction projects. Monitoring focuses on storm water inspection but also includes endangered species habitat; jurisdictional waters and wetlands; cultural and historical resources mitigation and monitoring; migratory bird nesting; and environmental training.
